Attorney's Docket No.: 07844-427001 / P391

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Previously Presented) A method comprising:
receiving a first user input on a client device bookmarking a remote destination displayed on the client device;
in response to the first user input, storing a link to the destination and a link to a remote bookmark media object associated with the destination on the client device;
receiving a second user input on the client device requesting a display of a bookmark window;
in response to the second user input, displaying a bookmark window, retrieving the remote associated bookmark media object, including in the displayed bookmark window a bookmark for the destination and the retrieved remote associated bookmark media object, the retrieved remote associated bookmark media object providing a representation of the destination;
receiving a third user input on the client device selecting the remote associated bookmark media object displayed in the bookmark window; and
in response to the third user input, accessing the destination.
2. (Previously Presented) The method of claim 1 further comprising storing on the client device a set of references to a plurality of bookmark media objects in response to a user input bookmarking each corresponding remote destination.
3. (Previously Presented) The method of claim 1, wherein accessing the network destination comprises retrieving a web page corresponding to the selected bookmark media object.

Applicant : Michael Kaplan et al.
Serial No. : 09/594,054
Filed : June 14, 2000
Page : 3 of 16

Attorney's Docket No.: 07844-427001 / P391

4. (Previously Presented) The method of claim 1, wherein accessing the network destination comprises retrieving a three-dimensional environment corresponding to the selected bookmark media object.
5. (Previously Presented) The method of claim 1, wherein presenting the bookmark media object comprises retrieving the bookmark media objects from one or more hosts.
6. (Previously Presented) The method of claim 1 wherein presenting the bookmark media object comprises displaying at least one thumbnail.
7. (Previously Presented) The method of claim 1, wherein presenting the bookmark media object comprises displaying a matrix of bookmark media objects.
8. (Original) The method of claim 1 wherein presenting the bookmark media object comprises displaying a stream of video.
9. (Previously Presented) The method of claim 1 wherein displaying the bookmark media object comprises outputting audible sounds.
10. (Previously Presented) The method of claim 1 and further including:
determining a status of the bookmark media object; and
presenting a default bookmark media object when the status indicates the corresponding bookmark media object is not available.
11. (Previously Presented) The method of claim 1, wherein the bookmark media object represents a current state of the corresponding network destination.
12. (Previously Presented) The method of claim 1, wherein the bookmark media object represents an entry point into three-dimensional content defined by the web pages.

Applicant : Michael Kaplan et al.
Serial No. : 09/594,054
Filed : June 14, 2000

Attorney's Docket No.: 07844-427001 / P391

13. (Previously Presented) A method comprising:
generating a set of bookmark media objects, each bookmark media object corresponding to a network destination within a computing environment, each bookmark media object providing a representation of the corresponding network destination;
storing the bookmark media objects on one or more servers within the computing environment;
updating each bookmark media object as a function of a state of the corresponding network destination; and
in response to a request received from the client device, providing one or more bookmark media objects to a remote client device, the client device having a location external to the computing environment.
14. (Previously Presented) The method of claim 13, wherein updating each bookmark media object comprises updating each bookmark media object as a function of a current state of the corresponding network destination.
15. (Previously Presented) The method of claim 13, wherein updating each bookmark media object comprises updating each bookmark media object as a function of the information received from a remote user.
16. (Previously Presented) The method of claim 13, wherein the set of bookmark media objects is generated by a server within the computing environment, and further wherein updating each bookmark media object comprises updating each bookmark media object as a function of host-determined conditions.
17. (Previously Presented) The method of claim 13, wherein updating each bookmark media object comprises updating each bookmark media object when content of the corresponding network destination is changed.
18. (Previously Presented) The method of claim 13, wherein generating the set of bookmark media objects includes generating a thumbnail for a first bookmark media object in the set.

Applicant : Michael Kaplan et al.
Serial No. : 09/594,054
Filed : June 14, 2000
Page : 5 of 16

Attorney's Docket No.: 07844-427001 / P391

19. (Previously Presented) The method of claim 13, wherein generating the set of bookmark media objects includes generating a video stream for a first bookmark media object in the set.

20. (Previously Presented) The method of claim 13, wherein generating the set of bookmark media objects includes generating an audio stream for a first bookmark media object in the set.

21. (Original) The method of claim 13 further comprising communicating the bookmark media objects to a client device for display to a user.

22. (Previously Presented) A computer-readable medium having instructions stored thereon to cause a programmable processor to:

receive a first user input on a client device bookmarking a remote destination displayed on the client device;

in response to the first user input, store a link to the destination and a link to a remote bookmark media object associated with the destination on the client device;

receive a second user input on the client device requesting a display of a bookmark window;

in response to the second user input, display a bookmark window, retrieving the remote associated bookmark media object, including in the displayed bookmark window a bookmark for the destination and the retrieved remote associated bookmark media object, the retrieved remote associated bookmark media object providing a representation of the destination;

receive a third user input on the client device selecting the remote associated bookmark media object displayed in the bookmark window; and

in response to the third user input, access the destination.

23. (Previously Presented) The computer-readable medium of claim 22, wherein the instructions cause the programmable processor to store on the client device a set of references to a plurality of bookmark media objects in response to a user input bookmarking each corresponding remote destination.

Applicant : Michael Kaplan et al.
Serial No. : 09/594,054
Filed : June 14, 2000
Page : 6 of 16

Attorney's Docket No.: 07844-427001 / P391

24. (Original) The computer-readable medium of claim 22, wherein the instructions cause the programmable processor to retrieve a web page corresponding to the selected bookmark media object.

25. (Original) The computer-readable medium of claim 22, wherein the instructions cause the programmable processor to retrieve a three-dimensional environment corresponding to the selected bookmark media object.

26. (Previously Presented) The computer-readable medium of claim 22, wherein the instructions cause the programmable processor to present the bookmark media object by displaying at least one thumbnail.

27. (Original) The computer-readable medium of claim 22, wherein the instructions cause the programmable processor to present the bookmark media object by displaying a stream of video.

28. (Original) The computer-readable medium of claim 22, wherein the instructions cause the programmable processor to output audible sounds in response to at least one audio signal.

29. (Previously Presented) The computer-readable medium of claim 22, wherein the instructions cause the programmable processor to determine a status of the bookmark media object; and present a default bookmark media object when the status indicates the corresponding bookmark media object is not available.

30. (Original) The computer-readable medium of claim 22, wherein each bookmark media object represents a current state of the corresponding network destination.

Attorney's Docket No.: 07844-427001 / P391

31. (Previously Presented) A system comprising:

a remote server, the remote server configured to store a bookmark media object, wherein the bookmark media object is associated with a destination located on the server;

a client device communicatively coupled to the server and configured to, in response to a first user input, store a link to the destination and a link to a remote bookmark media object associated with the destination on the client device; and

a web browser executing in an operating environment provided by the client device, wherein the web browser is configured to:

receive a second user input on the client device requesting display of a bookmark window;

in response to the second user input, display a bookmark window, retrieving the remote associated bookmark media object, including in the displayed bookmark window a bookmark for the destination and the retrieved remote associated bookmark media object, the retrieved remote associated bookmark media object providing a representation of the destination;

receive a third user input on the client device selecting the remote associated bookmark media object displayed in the bookmark window; and

in response to the third user input, access the destination.

32. (Previously Presented) The system of claim 31, wherein the bookmark media object comprises a thumbnail.

33. (Previously Presented) The system of claim 31, wherein the bookmark media object comprises an audio stream.

34. (Previously Presented) The system of claim 31, wherein the bookmark media object comprises a video stream.

35. (Previously Presented) The system of claim 31, wherein a client device configured to store references to the bookmark media object on the web server.

Applicant : Michael Kaplan et al.

Filed : June 14, 2000
Page : 8 of 16

Attorney's Docket No.: 07844-427001 / P391

36. (Previously Presented) The system of claim 31, wherein the web server is configured to update the bookmark media object as a function of a current state of the corresponding network destination.

37. (Previously Presented) The system of claim 36, wherein the web server is configured to update the bookmark media object as a function of information received from the web browser.

38. (Previously Presented) The system of claim 36, wherein the web server is configured to update the bookmark media object when content of the network destination is changed.

39. (Previously Presented) The method of claim 1, wherein the bookmark media object when presented to a user provides a multimedia preview of the corresponding destination.

40. (Previously Presented) A computer program product, tangibly stored on a computer readable medium, comprising instructions operable to cause a programmable processor to:
generate a set of bookmark media objects, each bookmark media object corresponding to a network destination within a computing environment, each bookmark media object providing a representation of the corresponding network destination;

store the bookmark media objects on one or more servers within the computing environment;

update each bookmark media object as a function of a state of the corresponding network destination; and

in response to a request received from the client device, provide one or more bookmark media objects to a remote client device, the client device having a location external to the computing environment.

41. (Previously Presented) The product of claim 40, wherein instructions to update each bookmark media object comprise instructions to update each bookmark media object as a function of a current state of the corresponding network destination.

Applicant : Michael Kaplan et al
Serial No. : 09/594,054
Filed : June 14, 2000
Page : 9 of 16

Attorney's Docket No.: 07844-427001 / P391

42. (Previously Presented) The product of claim 40, wherein the set of bookmark media objects is generated by a server within the computing environment, and further wherein instructions to update each bookmark media object comprise instructions to update each bookmark media object as a function of host-determined conditions.

43. (Previously Presented) The product of claim 40, wherein instructions to update each bookmark media object comprise instructions to update each bookmark media object when content of the corresponding network destination is changed.

44. (Previously Presented) The product of claim 40, wherein instructions to generate a set of bookmark media objects comprise instructions to generate a thumbnail for a first bookmark media object in the set.

45. (Previously Presented) The product of claim 40, wherein instructions to generate a set of bookmark media objects comprise instructions to generate a video stream for a first bookmark media object in the set.

46. (Previously Presented) The product of claim 40, wherein instructions to generate a set of bookmark media objects comprise instructions to generate an audio stream for a first bookmark media object in the set.
